

MEN & LASER HAIR REMOVAL

WHY GET LASER HAIR REMOVAL?

EXCESSIVE BODY HAIR/AESTHETICS

Laser hair removal is appealing for men who are uncomfortable with excess hair on their back, chest, stomach, or all over.

A lot of men treat their chest, not because they want to get rid of their hair completely, but they like to thin it out—they want it to be finer and sparser making them feel more confident in their skin.

Bodybuilders who don't want any hair on their body find laser hair removal helps enhance muscle definition.

Cyclists often laser their legs and lower bodies. A lot of body hair can cause added chafing and irritation when combined with tight cycling kits, sweat, and long ride times in the saddle. It also makes putting on compression tights, foam rolling, and massages easier and pain-free, since the hairs won't get caught or tugged.

Furthermore, laser hair removal is ideal for swimmers. If they can save one-tenth of a second by having less hair and break a record, then that works for them.

As men get older, hair also seems to appear in more areas than it previously did, including backs of arms, shoulders, necks, ears, toes, fingers and nose. Hair might even appear thicker and darker.

The Most Popular treatment areas for men include:

CHEST
STOMACH
BACK
NECK
FACE
CHEEKS
EARS

Imagine a more beautiful you. Refine and revitalize your appearance.

PROBLEM

Are you bothered by unsightly hair on your face, legs, bikini area or back? Are you tired of daily shaving? Have you used depilatory creams or tried waxing to remove hair? Do you find electrolysis to be painful and time-consuming?

SOLUTION

Laser hair removal can quickly and safely tame a cosmetic hair concern you wish to resolve. For both men and women, excessive hair can be embarrassing or unsightly. Now there are sophisticated laser techniques to permanently reduce or remove unwanted hair quickly and gently – making you feel more confident.

HOW DOES LASER HAIR REMOVAL WORK?

For hair removal, a low energy laser beam is used to remove unwanted or excessive hair. As the laser energy passes through the skin, it is absorbed by the color (pigment) in the hair follicles. The energy continues to the hair's root, destroying it without damaging surrounding tissue. Hair falls out gradually over the next two to three weeks. Normally, more than one session is required to capture the hair follicles at the ideal growth stage.

WHERE ON THE BODY CAN LASER BE USED?

Using a focused laser beam, we can target a small area like your chin or upper lip or larger areas such as your back or legs. Our lasers can target any area of your body.

IS LASER HAIR REMOVAL FOR ME?

Because the hair pigment absorbs the laser beam, laser hair removal is most effective on darker hair. During our consultation, we'll discuss your specific needs and recommend the most appropriate hair removal method. Laser hair removal does not treat grey or white hair.

IS LASER HAIR REMOVAL PAINFUL?

As we gently guide the laser beam over your skin, you'll feel a slight tingling sensation. If needed, a topical anesthetic gel can be pre-purchased and applied prior to treatment. Because the laser kills follicles only during their growth phase, multiple treatments are necessary to permanently eliminate hair.

CAN LASER BE USED TO TREAT OTHER CONDITIONS?

Lasers are used to correct a number of conditions including skin resurfacing, removing age spots, spider vein treatment, and tattoo removal – to name a few.

Client Testimonial

"Well I never knew my issue with what was going on with my body until I was much older. I have PCOS. If anyone can relate, I struggle with my weight, facial hair and some skin discoloration. My facial hair issue had gotten worse over the years and I started to get ingrown hair. Honestly trying to pick them out a hassle and caused lots of dark spots.

The staff member at La Unique Laser Centre were incredibly helpful and polite. They were accepting and accommodating. I have seen tremendous results, nearly completely removing the dark follicle pigment shadow and the deeper colored hair, which comprised a large area on my face.

This was an overwhelmingly positive experience, and I feel so much more confident after my sessions. I can safely say that the laser hair removal offered at La Unique Laser Centre is an experience that is very much worth the potential results. From the amazing staff, the clean and pleasant offices, to their knowledge and ability to deliver great services, they are at the forefront of advanced beaut care. I cannot thank them enough, and I would definitely recommend having a consultation with them if you are curious about improving your own hair removal needs. Thank you Rita Panchal and staff at La Unique Laser Centre."

BENEFITS OF LASER HAIR REMOVAL

- Permanent hair loss
- Excellent, rapid results
- Hundreds of hair follicles treated at once
- Nonsurgical, noninvasive procedure
- Leaves no scarring
- Virtually painless
- Small or large areas can be treated
- Very predictable outcome
- Speedy recovery
